

IN THE SPECIFICATION

Please amend the Specification as follows:

Paragraph on page 7, lines 23-31:

As discussed above, the mobile unit 15 can be a portable computer. The portable computer can be used for a variety of computing purposes including but not limited to Internet access, word processing, scheduling, mathematical computation and the like. For these purposes, the portable computer is loaded with an operating system. In an embodiment, the operating system [[cane]] can be all Windows 9x and NT platforms. In other embodiments, the operating system can be Windows 2000, Windows CE, Palm OS, Linux, or others. In one embodiment, the memory 341 can be random access memory into which the operating system is loaded. In another embodiment, the memory 341 can be any type of firmware such as EPROM or EEPROM into which the operating system is "burned."

Paragraph on page 8, lines 15-20:

The operating system 430 can include an application programming interface 490 (API). The API 490 is the software that the application processes 411, 414 use to request and carry out lower level services performed by the operating system 430. For Windows®, the API also helps applications 411, 414 manage windows, menus, icons and other graphical user interface (GUI) elements. The API 490 includes a set of standard software interrupts, calls and data formats [[tat]] that applications 411,414 use to initiate contact with device drivers 450,460.
